

METHIMAZOLE

One drug, Many ways.

1 CAPSULE

Capsules are a cost-effective way of providing medication to your pet. The downside to capsules is that often you must open the capsule to release the power, thus exposing your pet to often bad tasting active ingredients.

2 FLAVORED LIQUID

Flavored liquid is a great option for many owners. We can flavor the medication (often in a oil liquid base) thus helping with overall taste. We offer many great flavors.

3 FLAVORED ORAL PASTE

A newer dosing option allows for a quick administering of a drug. Our click device, allows for accurate dosing every time, and the flavored paste makes them come back for more!

4 TRANSDERMAL CREAM

Loved by many owners, transdermal cream delivers medications quickly across the animal's ear, without the drama or fuss associated with other administration methods.

5 FLAVORED CHEW

Another easy option that cats love. Flavored chews come in many yummy flavors such as chicken and beef. Other flavors are available, just give us a call to see whats new.
